

Establishing a Learning program for Design

Individual Learning Plan

A partnership with your manager to design a learning plan to establish a core foundation and personalized learning.

Core Pathways – Foundational Learning

Required Degreed pathways built for Design to establish essential knowledge to grow as an individual in a career in the space of Life Sciences. The focus areas are Design ethos, Creative Thinking, Team Collaboration, Storytelling, Personal Growth, as well as Leadership.

Personalized Learning

This is portion of the Individual Learning Plan (ILP) is owned by the designer and partnered with the manager. Designers can direct areas of growth that they show interest in and that the manager believes will bring value to the individual and the team.

The manager can have strong influence here so cultivate skills that both fill needs in the team, as well as the individual. This portion of the Individual Learning Plan will require some creativity because it is unstructured. It could involve books, seminars, workshops, conferences, certificates, and specialized IxDF coursework. This will also require some unique accountability of shared learning that will also need to be captured in the ILP.

Interaction Design Foundation (IxDF)

We are limited to 15 annual licenses

Designers who would like to enroll in IxDF will need to include that in their ILP plan, and submit a proposal through their manager. To distribute the licenses the Design PAM's will review all submissions prior.

Timing

Pathway learning can begin the first week of August
IxDF request can be submitted the first week of August
ILP should be finalized in July

Managers will have the needed forms and material the second week of July
