

Adoption & Value

The Impact of Design

Company Goals

- Grow a healthy business by improving our path to profitability and achieving product bookings
- Improve employee morale and capabilities to increase overall company performance and accountability
- Recognized as the next gen market leader by customers, partners, and employees

Goals of Design at Aktana

For design to be successful in its mission to improve the adoption and value of Aktana's product in the market, two focus areas must be galvanized into the product equation.

1) Process

**2) Leadership &
Accountability**

Approaches to Achieve These Goals

Process

Transparency

- [Project plan spreadsheet](#)
- [Design backlog](#)

Execution

- [Request process](#)
- [Design principles](#)
- Collaboration

Reviews

- Exec - Monthly
- Lead PMs - Weekly
- VP Eng - Biweekly

Leadership & Accountability

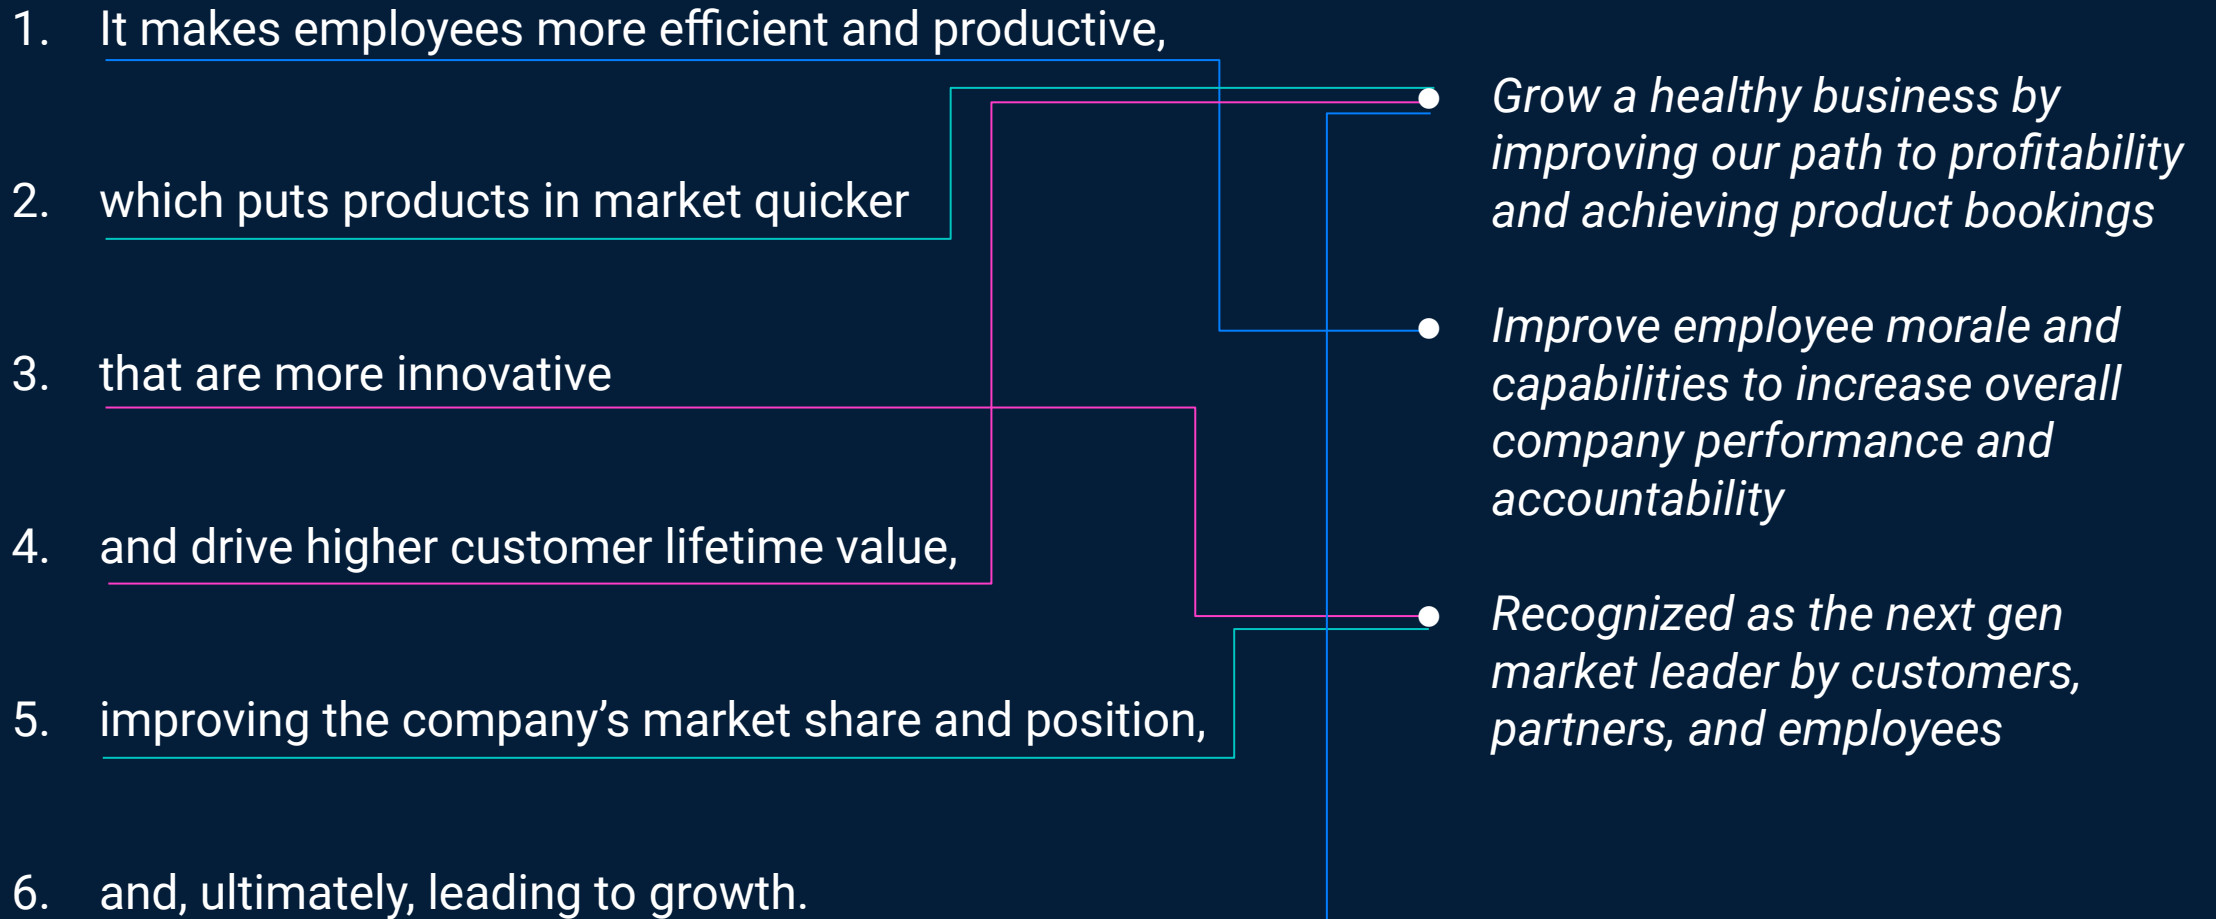

Design Strategy

- Modular product applications
- Self-service mindset
- Outcome oriented

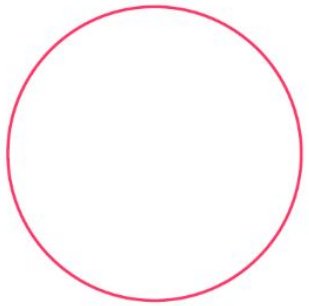

Betterwork OKRs

- Design driven and a leading voice at Aktana
- Continued Alloy governance
- Design the optimal product experience

How Design Drives Value

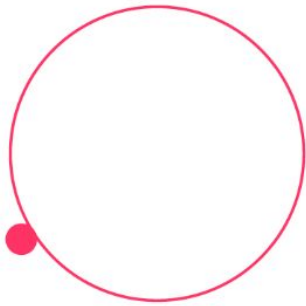

More integrated design drives more benefits.

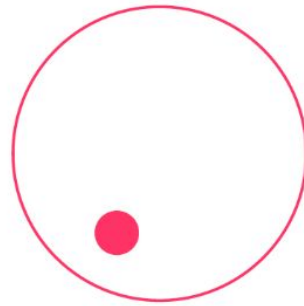

1/2

Half of companies don't employ design activity at all. [1]

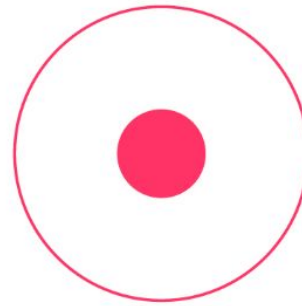

+22%
growth

Companies that purchase design have growth that's 22% above average over companies that don't purchase design. [1]

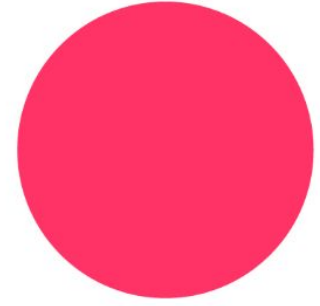

2x
speed

Efficiencies from design thinking cut design and dev time and enabled faster time to market by as much as 2x. [2]

+40%
growth

Companies that increase their design activities have growth that's 40% above average over companies that keep design activities the same or decrease them. [1]

+200%
out-performance

Faster Time to Market

Forrester

The total impact of IBM's design thinking practice

Design thinking “enabled organizations to reduce the time to complete the design, development, and testing processes—ultimately reducing time to market” by 50%.

They slashed the time required for initial design and alignment by 75% and development and testing time by 33%.

Design is the Differentiator

David Kester

Chief Executive Design Council

“This report shows clearly that businesses which invest in design out-perform their peers.”

Aktana Product Design Principles

Empower Users

- Building trust begins with meeting the users' outcomes while providing a sense of accomplishment.

Design is Not an Island

- Design is the product of collaboration amongst all entities involved to define a problem, understand a problem, and solve a problem.

Minimize the Pain

- People want what lies on the other side of their task, so the process of completing said task should be as simple and easy as possible.

Illuminate a Path to Completion

- Since the point of just about every task is a means to the outcome, make it abundantly clear how people can accomplish the desired outcome.

Consider the Context

- Products rarely exist in a vacuum. They are almost always part of a broader context (environment, audience, device, business), which informs how they'll be used.

Ensure Consistent Communication

- Products broker conversations between customers and companies. Although an organization can have many groups taking part in these conversations (product, design, marketing, clinical, engineering, legal, business, etc.) a product needs to speak to its audience with one voice.

Modularized Product Suite

Why?

- A necessary stepping stone to self-service applications
 - Permission setting based upon roles
 - Internal & external
- Reduces the burden to be a CP expert
 - Quicker onboarding for certain CP tasks
 - Team problem solving based upon tasks, not personnel expertise
- Reduces front end complexity
 - Fewer errors
 - Build faster
- Efficiency gains in addressing user, as well as, business needs
 - Small changes do not impact the larger product
- A suite of applications allows for a wider product offering with clearer pricing
