Furthering rep and management engagement

SCENARIO WRITING

Sunday

It is late in the morning at a home in Houston, Texas; Emily, a presidents club pharma rep, is getting back into her work mode. Last week she took her parents and two children on a cruise down the western Caribbean; an incentive trip she won last quarter. Even though she's been home for a few days already, it has been difficult to break her relaxation mode since the cruise.

Emily has only been off her territory for a week, but to her, it feels like longer. Now that she is committed, she wants to get caught up on the numbers and see if anything has changed in her territory and team. Houston, the 4th largest city in the US, is broken into three territories, and even still she averages a hundred miles a day, and tomorrow she's back on the road.

Cluttered around her is the company provided tablet, an open physical daily planner, a medium size note pad, and just beyond arms reach is her laptop. With her tablet in hand, relaxing on the sofa, she turns her iPad on and takes a sip of coffee. On her home row is the native chat and browser tiles, *Health Cloud*, and *[Company]* (PWA) tile, *Tableau*, and lastly an app in which she doesn't ever really use called *acSELLeron*. The latter being something HQ put on there when she first got her tablet; honestly, she swears it was developed by some execs kid. She hates it and doesn't use it because she doesn't find it useful.

As a sales rep, her first inclination is to see how her fellow competition is doing, not the competitive landscape, but rather her teammates. What did they do in sales while she was gone? Tapping the *[Company]* tile, she is presented with a dashboard of information. On the side panel, she sees the current scorecard, but before she can interpret the information a notification appears. She doesn't think anything of it, it's just a group message the DM sent out to the team days ago. No longer relevant. Once the message is closed, she can now focus on what is top of mind; she has slipped below Jackson and Rochel according to the scorecard. It doesn't phase her, she's been gone for a week, and she half expected to see just that, but nevertheless, she still doesn't like seeing her name in the 3rd position. Also on the *[Company]* web app dashboard, she sees the updated sales trend models, a projection of what suggestions she may see in the coming days in *Health Cloud*, a calendar that is currently syncing to her personal iCal and her *Health Cloud* calendar, and lastly some news snippets that appear to be covering some of the latest HQ information regarding on-label messaging.

With Emily's curiosity satisfied, the work begins; planning. She already knows she wants to visit some key accounts this first week back. Two of them she feels close to getting past the gatekeeper, and three are low performers but she sees potential as she's been cultivating each one for months now and is happy with the overall progress. The remaining eight are her favorites. She likes visiting them as they have been some of her longest and best accounts, but she also feels like it is visiting friends.

Her familiarity with these accounts allows her to add them to her calendar without checking on clinic hours or when is the best time to go visit. She reaches over and grabs her laptop to review her calendar. There are a few personal events scheduled for next week, her youngest has a prescheduled eye exam on Wednesday at 14:10, so she balances her week amongst and

inputs when she plans on visiting these 13 key accounts. As changes are made to her calendar, in the background, *[Company]* is automatically syncing the new calendar entries; information that will be critical when providing location-based suggestions. Emily knows that it is redundant, but she likes to transfer the events in her iCal into her daily planner for the week. It has been a part of her process since she first started as a rep and has got accustomed to always having her daily planner with her. This has been handy at times when the tablet's battery has died. She also believes that because she writes out the events in her planner, it helps to lodge that information in her mind. Much more so than doing the digital equivalent.

Emily feels pretty tech savvy but she is a bit slow to adopt new technologies and practices, mostly because she trusts her process the best. In general, she pushes back against change until she learns its value for her. Too many times HQ has insisted they use some new program because "it will make things much easier" which in almost every case turns out to be a fallacy. *[Company]* has earned her trust and appreciates the information she receives in the *Health Cloud* CRM as well as the *[Company]* PWA.

With the spine of her week planned she wants to see what suggestions she'll get from *[Company]* to further plan her week. Moving back to her tablet she opens up the *[Company]* app and again is presented with a dashboard. She clicks on the *planning* tile and is presented with a proposed schedule for the week to come. All of her calendar entries are there, as well as, location-based suggestions to visit a few other accounts that are nearby. An additional detail that Emily sees in this viewport is proposed suggestions that, with the current data, will be surfaced in *Health Cloud* during the week. Other than a glance she doesn't spend much time looking over them, she knows they could change as the week progresses, and she's gotten into the habit of reviewing them every morning after the kids are dropped off. *[Company]* has earned her trust and appreciates the time saved. One example of this appreciation is now, more than ever, she feels the home office is listening to the field more. Emily believes a part of this has come from *[Company]*. In the open notes field, she can simply add #feedback before a note and that comment gets tagged, synthesized, and reviewed by leadership to more proactively address concerns in the field.

Emily's final action in the *[Company]* is to reject one of the location-based suggestions. It is for an account that has been a thorn in her side; she's in a good mood and does not want to think about visiting them next.

Maybe the week after.

Upon rejecting that account another populated in its place, but she didn't think much of it. Despite taking the time to reject one location-based suggestion, she does not take the additional time to accept the others. She has learned that she doesn't need to, and she is aware that things can change. Not accepting all saves her time, even if only a split second.

Back on the dashboard, Emily clicks into the *progress tracker* tile to see how she is doing to plan. She gets a high-level view of how many accounts she has visited this quarter, if she is on or off pace, as well as a grouping of her accounts based upon sales.

In less than an hour or two cups of coffee, the latter which is now cold, Emily has finished her planning for the week and is back into a positive mindset about work. She cleans up her

impromptu workspace and for the remainder of the day goes back to being a mom and hanging out with her kids.

Monday

Before the sun is up, Kris in her home office is finalizing her notes for today's team call. With tea steeping adjacent, she reviews the latest call notes and sales data, writes on a sticky note to make a special call-out to Emily who is recently back from her cruise, and to congratulate Jackson on an outstanding week.

At the time of the weekly team call more than half of the reps are already on the road listening in as they drive. One rep, Miah, is unable to dial in; however, the *[Company]* system records the weekly team calls, so he can review today's call later.

Emily was grateful for Kris's kind comments during this morning's team call and she enjoyed sharing a quick story with her teammates; it makes her feel good to know she's on top and everyone was excited for her. Although, on the road, things weren't as pleasant. Road construction in Texas is active 51 and a half weeks a year, so the slow down on SH288 wasn't a surprise. She was surprised when the *[Company]* app notified her, via voice, of the congestion ahead being worse than normal and recommended an alternate route so that she would reach her destination on time. This was a new experience for Emily; she wasn't sure if it was a new feature, but it saved some time, a bit of a headache, and she suspects some gas as well.

Upon arriving at her destination, Emily opens up *Health Cloud* to do a last-minute check on her notes and review the suggestions, and insights for this account. In doing so she also sees a daily suggestion that intrigues her. It would require visiting an unplanned account today, but she likes and agrees with the recommendation. So she confirms adding it to her schedule and opts to move a target from today to Thursday.

Back in her home office, Kris is in the *DM app*; actually, it is pretty much always open and up to date if her computer is on. Currently, she is analyzing some sales trend data that is showing a real uptick in Oklahoma. Seeing as the two states are close to one another, in proximity and policy, this behavior seems unusual. Kris emails the brand manager to see if there is anything that she isn't aware of that is favorably affecting sales outside of her region. Kris, a long standing ex-rep who moved into management about 5 years ago to be home more with her family, knows how to play the game. It is in her best interest to reach out to the brand manager at HQ but she certainly isn't going to wait around for a response. Mostly it is checking off the box before she goes and does some more digging. In the *DM app*, she sends a group message to the fellow district managers to see if anyone else has noticed what she has and overall to start a group conversation on the matter.

In the midst of all of this, she receives a request notification from Carlos. He would like to have the team's MSL outreach to one of his targets. Carlos is new, young, and ambitious, and Kris sees a lot of promise in him; although, before she schedules the MSL she does want to get on a call with Carlos to better understand the request submitted.

As Emily's day is wrapping up she engages in the very thing that makes her feel "tech-savvy", inputting call notes by voice. Sitting in the parking lot of the *Woman's Hospital of Texas* she dictates her notes for the day. Even though she does still take some handwritten notes during the day, she thinks this dictation process is pretty cool and it makes her feel good reading out her own shorthand and adding in some additional detail for each of her targets today.

The process is briefly interrupted when she receives an incoming message from a teammate asking for some assistance setting up an upcoming event. She responds "of course, I'll call you on my drive home", and then gets back to finishing up her call notes before she makes the 25-minute drive home.

PERSONAS

[Rep](#)
[District Manager](#)

USER STORIES

Rep Emily:

- is competitive and wants to be able to check her progress against her teammates. Often she is in the President's Club and regularly wins incentive prizes. Both are a sense of pride for her.
- regularly checks her progress to plan and doesn't want to wait for updated data. • spends too much time planning and wants to reduce the effort to plan her week so she can spend more time with her family.
- would appreciate the usage of one digital calendar rather than multiples that are not synced and therefore often neglected.
- feels she knows her accounts and targets the best, but does want help maximizing her time in the field.
- would appreciate traffic assistance, that does not require her clicking into a maps app. A vast majority of her job is spent on the road.
- enjoys technology innovations that make her profession easier and being able to dictate her call notes, hands-free, would be an innovation that saves time, is easier, and would allow her to multitask while driving. The ease may also change her behavior to entering call notes after a call rather than at the end of the day.

Rep Miah:

- would like the ability to review missed team calls without having to have a teammate take the added time to catch him up.

Rep Carlos:

- is having a difficult time answer off label questions and per the doctor would like to discuss some additional benefits with an MSL. Therefore he needs to easily be able to schedule that meeting.

DM Kris:

- would like an all in one location to access the data she needs. Eliminating all of the various logins and cluttered bookmarks.
- wants dynamic data for her region and others so she can be proactive in responding to the market.
- conducts a weekly team meeting that lasts 20 to 45 minutes. She places emphasis on each of her reps attending, but understand situations arise, and would like absent reps to have the ability to review the call later.
- would like to increase the general knowledge base and collaboration of her team as well as the other regional/district managers. She is a firm believer that when all succeed the individual performs even better.
- manages a very robust team and want to make sure that resources, such as the teams MSL, are not being wasted or misused.

HOW MIGHT WE

- save time for the rep during the planning and execution of their call list?
- ensure the rep is on target?
- show the rep the impact of her/his actions?
- inform the rep of the strategic/tactical HCP plan?
- leverage the competitive nature amongst rep team members?
- get the manager to encourage healthy competition via the [Company] platform?
- foster collaboration amongst rep team members?
- get the [Company] platform integrated into the managers' day-to-day?
- we get the rep to input feedback on a call/sync sooner? (voice)
- leverage progressive web app with service workers?

RATIONALE

UX Law #1 - Aesthetic Usability Effect

*Users often perceive aesthetically pleasing design as design that's more usable. **First impressions matter.*** The visual design of our products and environments will always what drives a user's first impressions. Regardless of how "good" a product is, the appearance needs to look and feel up to date, as well as, being equal to or better than our competitors.

A picture is worth a thousand words. An interface is worth a thousand pictures. - Ben Shneiderman

UX Law #4 - Hick's law

The time it takes to make a decision increases with the number and complexity of choices.

Reduce the cognitive load. Users are very goal-oriented and super impatient, therefore we

must avoid distracting a user from their goals. To do this we need to keep our environment clean

and simple consisting of a clear call-to-action and a value proposition above the fold. A rep user should know what to do and a high-level takeaway at a moment's glance.

Simplicity is not the goal. It is the by-product of a good idea and modest expectations. - Paul Rand

UX Law #11 - Miller's law

The average person can only keep 7 (plus or minus 2) items in their working memory.

Continued reduction of cognitive load. Users have certain, seemingly natural, cognitive limitations and the product needs to be aware of such rein. It is our responsibility by design, business objectives, and requirements to focus on the users' abilities and to block out cognitive overload through endless configurations.

The main goal is not to complicate the already difficult life of the consumer. - Raymond Loewy

UX Law #5 - Jakob's law

Users spend most of their time on other sites. This means that users prefer your site to work the same way as all the other sites they already know.

Familiar, but different. Our users spend a sufficient amount of time on CRM's. This could result and account for digital behavior patterns not found within other common UI interfaces, i.g. Social, eCommerce, financial.... Ensuring that our product offerings provide familiarity in their design and functionality will go a long way to providing value.

User-centered design means understanding what your users need, how they think, and how they behave - and incorporating that understanding into every aspect of your process. - Jesse-James Garrett

UX Law #17 - Serial Position Effect

Users have a propensity to best remember the first and last items in a series. **Speak to the users.** Field force users believe "they" are the best sales tool, which makes persuading them very challenging. Reason text is a key facet for us to present the rationale for our suggestions, also allowing us to build trust and loyalty with the sales rep. 1st, 3rd, 2nd.

True interactivity is not about clicking on icons or downloading files, it's about encouraging communication.

- Ed Scholssberg
