

Setting up [Company]

-a user story

Why [Company]

As a member of the vendor solutions team, Steven Vicska, the Global Sales Ops Administrator for PharmaCo, has been heavily involved over the past few months understanding [Company]'s value and how they can positively impact the business challenges set forth. Steven has been an advocate of [Company] for a while now after it was recommended by a former colleague during a conversation regarding optimizing field force needs and better alignment of campaign initiatives. Similar challenges the ex-colleague has.

Even though these discussions have been ongoing at many levels at PharmaCo these past few years, the importance has never been as highlighted as it is now. The challenges of growth are more apparent than ever this year;

- maintaining scalability as smaller markets are expanded into
- marketing and campaign challenges across regions
- the ongoing challenge of what do we do with all this collected data

and solutions to these business challenges needs to be put in place.

Through Steven's advocacy and hard work, the business end of selecting and signing a new vendor is now complete. With a defined scope of work finalized, [Company] is finalizing some initializations and then the partnership can begin.

The initial pilot setup will be rolled out across 3 countries within the EU region; Germany, Poland, and Slovakia. The latter being a recent expansion, with all three countries closely overseen by Steven and his assembled team for this vendor rollout; Franz who is located in the German office focusing on the primary market, Germany as well as Slovakia, and Mila who is on the ground in Poland.

Peface

During the vendor engagement phase, Steven meet the acquaintance of Phillip Malo, a Senior Delivery Consultant at [Company], who will be his primary contact. Phillip presented himself as very knowledgeable, experienced, and informed of the business challenges being addressed. And even though the [Company] license has PharmaCo self servicing their account, Phillip relay that he would be available to aid Steven through the process. He even sent over some tutorials and how to guides that will come in handy, Steven is certain of that.

It is day one and Steven just opened an email welcoming himself and PharmaCo as an [Company] partner. It also provides some beginning instructions from Phillip, as well as a recap of the SOW and [Company] license information; servicing a 1000 member field force with published target suggestions and account insights, with DM Suite access for 100. Additionally, PhramaCo purchased two AI learning modules to go along with their license, but since this will be largely managed by a consulting service provider, Steven skimms this bit of detail as it isn't pertinent at the moment.

Shortly after, Steven receives an inbound call from Phillip informing him that he can start setting up PharmaCo's environment within [Company] and they can be up and running in the field by the end of the week. On the call Phillip references the content in the email, and has Steven navigate to [Company].com to login via the CTA on the navigation bar. All Steven had to do was enter his work email address and he is in; prompted to add a password for subsequent logins, but now Steven is set to begin. Phillip takes an extra second or two and talks through how Steven can invite other team members to access the environments. Lastly, while still on the phone Phillip congratulates him and sincerely calls out his excitement of the new PharmaCo partnership.

Chapter 1: Setup

Presented first is the Environment Setup component of the [Company] wizard/commander, which is a simplified and paired down product flow that is connecting the PharmaCo CRM to the [Company] database. The process flow consists of a simplified easy to complete steps; however, the process of transferring all that needed data does take awhile. Nevertheless, Steven gets the process started error free for Germany, Poland, as well as Slovakia, and now is waiting to be notified of the successful environment setups.

Day 2

As specified the data transfer process took some time, for Germany at least; nearly a full 24 hours, the other two took much less time. For each pilot country, Steven has successfully connected [Company] to each CRM sandbox environment as well as, read-only, Production access. With this notification he may now proceed with the subsequent setup phases in the [Company] wizard/commander.

Admittedly these next few steps were a bit tedious, with special emphasis on the Data Mapping section, but then again there are parts of the job that are simply that. However, through this process Steven validated the needed sales teams with their product and account associations, set up the delivery channels, confirmed the segmentation and event data, and finally validated the metrics that will be used.

And with that, the standard initialization to be up and running with [Company] is complete. Although, to help ensure the success of this rollout, Steven has leveraged some additional sales data that will also need to be uploaded and put to use. That may take some help from Phillip, but today, it's not essential.

It has been a long day, but valuable, as Steven feels confident that the [Company] setup is correct and believes they are ready to begin some light testing publishing account insights.

Chapter 2: Global Solutions

Day 3

Although there is still plenty of work remaining, Steven is pleased that overnight the [Company] Contextual Intelligence Engine (CIE) ran utilizing the synced standard data sets, and successfully published test account insights. His confidence level in this project is high

after a short amount of time getting things setup. Today, he's gonna need some help to really start pushing things along.

Charlie, a member of the Global Sales Ops team, has been enlisted to connect the additional sales data into [Company] as a custom configured object. A straightforward process that will allow this data to be used after the data point name and description are added and then mapped to one of the [Company] data point categories. All done via an API.

Additionally, overnight the CIE did an analysis of the synced standard data and provided recommendations for Solution Templates. These can be used to quickly and effectively begin publishing field force suggestions.

Marta, is the Global Brand Manager for included brands and has been called upon by Steven to be responsible for assembling campaigns by means of the Solution templates for the individual country level. Something that will then enable those country level brand teams to engage with.

After reviewing the default enabled Solution templates, Marta begins by configuring which brands will be applied in the selected countries, reviews the KPIs for the enabled templates so adoption and progress can be tracked, and tailors a few of the thresholds.

Next, Marta runs the new digital campaigns against a historical data set from Poland. This was a feature that stood out to her during one of the [Company] sales demonstrations as a true way to test and validate prior to publishing live. This process does take a bit; although, after she identifies which data the CIE should run and initiates the process, she takes the time to go back and enable the global solutions templates to be adjusted at the country level simply by making a few choices in the settings feature. This will allow the country brand managers to make a few modifications that are pertinent to their unique brand challenges.

Day 4

The historical data run produced an interesting report in Marta's mind. The readout gives her a strong sense of optimism and she shares that with both Charlie and Steven. The three of them discuss a few elements in detail, but in the end they agree to proceed with the campaigns Marta has built; allowing for a bit of comparison.

Charlie also shares out that the external sales data has been configured into the [Company] system and now is usable alongside the other data objects for campaigns.

Chapter 3: Applying Solutions

With an introduction email and access granted, both Franz and Mila, the respective country brand managers, are now able to refine and apply the brand solution templates into their markets. The summary Marta provided gives both brand managers clarity to what needs to be done and the objectives they are driving towards in each market.

Franz and Mila are both very busy and even though they do like being included in this new vendor rollout, (it felt good to be handpicked by Steven) they still have existing campaigns to manage. After some time to orient themselves with the system and its usability, both brand managers begin adjusting the Solution templates provided by Marta to best fit their market needs. Mila is pleased with the simplified process and happy it didn't take much of her time. Franz, however, is a bit more sceptical; that is also in his nature. His process is taking a bit longer because he is setting up both Germany and Slovakia, which have much different KPI's and overall field force sizes. Regardless, he is able to complete the process without issues and minimal questions.

Chapter 4: Going Live

To help with adoption by the field force, and also because it was called out as a best practice by [Company], Franz and Mila begin the process of sending out some test suggestions, using sandbox data, to a select team of field force members. The purpose is to get some initial feedback from the suggestion receiver, ensure they feel right, as well as letting those team members know that they are just as much a part of this new adopted process as the folks at global.

Day 5

Feedback is rolling in and in general the comments and notes are positive. Most issues seemed to be around the data set used, which made some of the suggestions come across as weird. The reporting side of things showed to both Franz and Mila how they will interact and keep track of their specific brand challenges. With some curiosity, Franz played around with some of the customer journey flows in a few of the Slovakia campaigns, since that market's brand team is not in country.

Back at Global, Steven is keeping tabs on this week's progress. During the sales cycle, PharmaCo added on a consulting package. A good call in Steven's mind. This has industry experts from Phillip's team review and help identify possible improvements within each market setup, before going live.

Phillip, while on the phone with Steven, verifies access to each of the country environments and lets him know that they will run some diagnostics, report back, and jointly make whatever changes PharmaCo would like before true go live. Which could happen as soon as two days.

Day 21

After two weeks the global, regional, and country specific teams are getting a good; albeit, early readout of how AI driven suggestions and account insights are being adopted. At the global level the excitement in Steven and Marta comes from the early predictions on the KPI's over the coming month and quarter and what that means for some long standing brand challenges.

In Germany, Franz isn't so sceptical nowadays, and is pretty keen on the feedback coming in from his field force team. It has already helped improve the solution template settings. And because he is overseeing two markets, he actively compares who each is doing and where

learnings from one might be leveraged to another.

And in Poland, Mila, is impressed that the system provides feedback as well. Those have already helped improve her solution template settings with small but valuable adjustments.

Chapter 5: Business Impact

After 3 months, both Mila and Franz prepare for the project QBR with the global leadership team. Historical performance data is compared against the [Company] project data pointing to clear indication of ROI and projected outlooks of how these setups will further help the brand.

With strong numbers and clear resolutions, Steven is extremely pleased how successful this implementation has been and begins forecasting how efficiently their [Company] partnership can scale.
